Technical Projects

Friender | Tinder-like Web App — Live Demo | Github
Node/Express powered back-end and React/HTML/CSS front-end. Key features include authentication with JSON web token, comprehensive CRUD operations, and a user image storage utilzing AWS S3 buckets.

Warbler | Fullstack Twitter Clone — Live Demo | Github
Python/Flask backend, Javascript/jQuery/HTML/CSS front-end. Utilizes a RESTful API to allow users to add, edit, delete, like, and unlike messages. Implemented user sign up, authorization, and authentication using Flask session and local storage. Leveraged SQLAlchemy to dynamically query and update the relational database using one-to-many and many-to-many relationships.

Jobly | Fullstack Job Board — Live Demo | Github
Node/Express Backend, React/CSS frontend. RESTful API with resources for users, jobs, companies, and applications. Single page application, utilizing authorization and authentication via JSON web tokens and password encryption with BCrypt.
